Sulfurcell Signs 16 MW Supply Agreements in China and India

German thinfilm solar module maker continues to expand its global reach

Berlin, 19 May 2010 – Sulfurcell GmbH, one of the leading manufacturers of CIS thin-film solar modules, has concluded supply agreements with new customers in India and China in excess of 16 megawatts (MW). In China, over 10 MW of Sulfurcell's modules will be deployed in new construction and building integrated applications. In India, over 6 MW of the company's modules will be used for commercial rooftop projects.

"Sulfurcell's innovative solar power solutions have been met with great interest in the Asian market," says CEO and company founder Dr. Nikolaus Meyer. "The new supply agreements in China and Asia for over 16MW of our CIS modules mark an important stage for us as we extend into the global market."

Sulfurcell has concluded a supply agreement exceeding 10 MW with a Chinese company that plans to deploy Sulfurcell solar power modules for large-scale construction projects and building integration (BIPV) applications in mainland China. Sulfurcell's high quality black modules are especially well suited for building-integrated solar power systems.

In India, Sulfurcell will provide over 6 MW of modules by 2012 to the Prime Group of New Delhi for mainly commercial rooftop projects. The Prime Group, which has subsidiaries in Europe and the Far East, produces and operates high-tech products and is also active in the renewable energy sector.

"We value not just the technological competitive edge offered by the Sulfurcell modules, which are particularly good at generating high yields in spite of the heat of this region, but also Sulfurcell's reputation for high quality," said Surinder Mehta, Founder of the Prime Group. "Our agreement with Sulfurcell marks the beginning of a what we hope will be a mutually beneficial collaboration."

"Sulfurcell's high quality and powerful thin-film modules are uniquely well-suited for BIPV," said Dr. Nikolaus Meyer. "In the coming years, we hope to help shape the building-integrated photovoltaics segment with expertise and innovations."

ABOUT SULFURCELL

Sulfurcell is a leading designer and manufacturer of CIS thin-film solar modules. The company was founded in 2001 as a spin-off from the Helmholtz Centre for Materials and Energy, formerly known as the Hahn-Meitner Institute. Sulfurcell has received several awards for its cutting edge research and product development. The UK's Guardian

newspaper just recently again listed the Berlin company among the “hottest 100 clean technology companies in Europe”. In 2008, Sulfurcell was provided with growth financing amounting to 85 million euros by renowned international investors, including Intel Capital and the BEU fund supported by Vattenfall Europe and Gaz de France. This fresh capital was utilized for constructing new production facilities and for research and development.
